- A first result, building on the framework of Chapters 1–2.
- A second result, extending the analysis.
- Discussion and consequences.

Building on the relational models $\mathfrak{M}_R$ of Chapter 1 and the neighbourhood models $\mathfrak{M}_N$ of Chapter 2, we show that...

Theorem 1

(State your central result here.) For every formula A , $\vdash A$ if and only if $\models A$.

- What the result buys us, and how it bears on **K**, **KT**, and **S4**.
- Connections to neighbourhood semantics for non-normal logics [1].
- Open questions, taken up in the conclusion.
